Microsoft Power BI

Roberto Fausto

Analytics & BI | Python, SQL, Power BI & Excel | Former Attorney | Triathlete

Natal, Rio Grande do Norte, Brazil

Summary

I am an attorney and holds a degree in Analysis and Systems Development, currently transitioning from Law to the Data field with a focus on Analytics and BI. I have 14 years of experience as a lawyer, which has strengthened transferable skills for data, such as investigating complex scenarios, analytical reasoning, problem structuring, deadline management, and objective communication with different audiences and stakeholders. In law, my work has always been to transform scattered information into a clear and defensible narrative. In data, I apply the same logic to define relevant questions, understand the business context, gather requirements with stakeholders, organize and analyze data, identify patterns, track KPIs, and communicate insights practically through data storytelling to support decisions and drive impact. Tools and knowledge:- Excel and Power BI for analysis, metrics, dashboards, and reports.- SQL for data extraction, processing, validation, and analysis.- Python for automation, cleaning, and data manipulation.- Tech-savvy with strong familiarity with hardware, software, and IT fundamentals, adapting quickly to new tools and processes.- Intermediate English for technical reading and communication. I am a triathlete and bring discipline, consistency, and a continuous improvement mindset to my work. I am seeking opportunities to collaborate with multidisciplinary teams, work on continuous improvement, support decision-making, and deliver analyses that bring clarity to the business in a data-driven environment.
